

## FIREWIPES, THE INDUSTRY'S CHOICE FOR DECON

### CREATED BY A FIREFIGHTER FOR FIREFIGHTERS

Firewipes offers a quick, convenient, and disposable cleansing solution for those exposed to hazardous environments and fireground contaminants.

They are used primarily to aid in the cleaning and removal of soot, smoke, and other potential carcinogens from the skin. They are innovative in design as each wipe is optimized for safety and ease of use.

The Firewipe is an 8" x 12" industrial strength biodegradable and compostable 100% viscose towelette. It is saturated with a unique formula specifically designed to minimize additional carcinogenic exposure through dermal absorption.

Our airtight individual packaging allows for storage in coolers without fear of cross contamination between the wipes and other cooler contents. Chilled Firewipes not only aid in the decon process but also in the rehab recovery by cooling and refreshing the user.

Firewipes have many other features such as a 3-year warranty post date of purchase, no added fragrance, alcohol free, and does not leave a sticky or oily residue.

### FIREWIPES ARE INDIVIDUALLY PACKAGED TO:

- Eliminate cross contamination
- Prevent wipe dehydration
- Maintain consistency
- Increase portability
- Prolong shelf life
- Reduce cost
- Limit waste

### FIREWIPE FEATURES:

- Biodegradable/Compostable
- Hypoallergenic
- No harmful chemicals
- No Latex
- No Alcohol
- No harsh chemicals
- No added fragrance
- No oily residue

### FIREWIPES CAN BE USED BY:

Structural and Wildland Firefighters  
EMTs, Paramedics and  
First Responders

Special Operations, TRT, &
